An easie way to know what signe the Moone is in. fol,77
Certaine elections that are to bee chosen by the course of the Moone. folio,78
Certaine Tables that shewe the rysing and setting of the Sunne, the length of the day and night artificiall, &c. folio,81
A Table to knowe what Planet rules euerye howre, eyther by day or night folio,83
A table to know ℔ length of ℔ planetary hours, 84
A figure shewing the same more easier and readier without tediousnes. folio,86
The properties & inclinations of the planets, 88
The names of all the Colledges and Halles, in bothe vniuersities, Oxforde and Cambridge, 93
The Shires, Cities & Borroughes, that haue place in the Parliament, with all the parish Churches contained in eache Shyre. folio,97
The names of all the Bishopricks in Englande and Walles. fol,101
The names of the Wardes and parishes in London. folio,103
All the principall fayres, in a more orderly maner then hath beene heeretofore set forth fol,106
The highwayes also from one towne to another, much larger then hath been set forth before, fol,115

A perfect rule to know the 5 Lawe dayes in the Court of Arches, the Audience of Canterburie, and the ſpirituall and Ciuill Lawes throughout the yeere.

Michaelmas Terme.

S. Fayth	All ſoules	S. Andrewe
S. Edward	S. Martin	Concep. of
S. Luke.	Edmond king	our Lady
S Simond & Iude	Katherine,	

Ye muſt well vnderſtand that the firſt day enſuing, each of the feaſtes ſette downe before euerye Terme, the Court of Thearches is kept in ꝑ fore noone at Bowe Church, and in the after noone the ſame firſt day, is kept in Southwarke the Admirall Court for Ciuill cauſes.

The ſecond day after eache of theſe feaſtes, the Audience Court of Canterbury, is held in ꝑ Conſiſtory in Paules in the forenoone, and the Prerogatiue Courte of Canterbury is kept in the ſame place in the ſame after noone the ſame day.

The third day following any thoſe feaſtes, the Biſhop of Londons Court of Conſiſtorie is holden in Paules in the forenoone, and in the ſame place is the Court of the Queenes highnes Commiſſioners vpon appeales, and the Court of Delegates holden in the after noone the ſame third day.

Hillarie Tearme.

S. Hillarie	S. Scolaſtie.	S. Chadde
S. Wolſtan	S. Valentine	Perpetua & fæ.
Conuer. of Paule	Aſhwedneſday	S. Gregorie
S. Blaſe	S. Matthie	Ann. of our L.

¶ Understande that the foure first Feastes of this Tearme be neuer chaunged, but are certaine, the other are sometime kept, and sometime omitted, after the course of the yeere altered. And if it so chaunce, that one of those Feastes be Ashwednesday, that are after saint Blase day, so that the same Lawe day after Ashwednesday cannot bt kept, because the Law day of the other feast dooth light on the same day: the second Lawe day after Ashwednesday shall be kept, and the other omitted.

¶ And if the Lawe day after ashwednesday be the next day after saint Blase, then shall all and euery of those dayes bee obserued in order, as they may be held conueniently.

¶ And note, that although Ashwednesday bee the seauenth in order, yet it hath no certaine place, but is chaunged as the feast of Easter causeth it.

Easter Tearme.

The 15. day after Easter,
Saint Alphege,
Saint Marke Euangelist.
Inuention of the Crosse,
Gordiane.
Saint Dunstone,
Ascention day.

¶ In this Terme, the first sitting is alwaies kept the Monday beeing the xv. day after Easter, and so after the feasts heere noted, which shall next followe by course after Easter, and the like space beeing kept betweene other feastes, the rest of the lawe daies are kept the thirde day after the Ascention, which is the last of this Terme. And if it happen that the Ascention day bee come before any of those feasts aforesaide, thē they are omitted for that yere. And likewise, if any of those dayes come before the 15. day after Easter, those dayes are also omitted.

Trinitie

Trinitie Sunday,	S. Botolphi	
Corpus Christi,	S. Iohn	S. Swithine.
Boniface Bishop	S. Paule	S. Margaret
S. Barnabe.	Tran. S. Thomas	S. Anne.

¶ Remember that the Lawe dayes of this Terme are chaunged by the meanes of Penticost, and the first sitting is holden alwayes the first day after Trinitie Sunday, and the second law day is holden the first day after Corpus Christi day, except it fall on some day aboue named which chaunceth sometime, and then the sitter day is kept, and after the second Session, account foure dayes or there about, and then looke which is the next Feast, and the first lawe day after the saide feast, shall bee the third session. The other lawe dayes followe in order, but so many of them are kept, as for the time of the yeere is thought meete. And note generallie that euery day is called a law day, that is not sunday or holy day, and that if the Feast day bering knowne of any Court day in any Terme, the first or second day following be Sunday, then the Court day is kept after the saide holy day or feast.

First of all, these daies are not altered, except they light on Sunday, or some Holie day, and euery day is called a law day vnlesse it be sunday or holy day.

¶ A neceſſary and perfect Rule to knowe vvhen the Termes begin and ende, and how many returnes are in euery Terme.

Eyght dayes before any Terme bee, the Exchequer openeth for certainty. Except the Terme of of Trinitye, that openeth but foure dayes before truely.

Hilary Terme beginneth the 23, day of Januarie, if it be not Sunday, then the next day after, and endeth the 12, of Februarie.

Octabis Hillarii.	Craſtino Purific,
Quind. Hillarii.	Octabis. Purific.

Eaſter Terme beginneth xviij, dayes after Eaſter, & endeth foure dayes after the Aſcention day

Quind Paſch	Menſe	Quinque Paſchæ
Tres Paſchæ	Paſchæ	Craſt. Aſcention

Trinity Terme beginneth the next day after Corpus Chriſti day, and endeth the Wednesday fortnight after.

Craſt. Trinitatis.	Quind. Trinitatis
Octabis Trinitatis	Tres Trinitatis

Michaelmas Terme beginneth the ninth of October, if it be not Sunday, and endeth the twentie and eyght of Nouember.

Octabis Michaell	Craſt, anima.
Quind Michaell	Craſt, Martini
Tres Michaell	Octa. Martini.
Menſe Michaell	Quind Martini.

In this Calender folowing, you ſhall oftentimes find theſe Letters B. and E. The which ſignifyeth ſuch dayes as the Egyptians note to bee daungerous to begin or take any thing in hand, as to take a Journey, or any ſuch thing.

Ianuary hath 31. daies.

The Moone 30.

Warme meates this Month conuenient be,
White wine alſo as wholeſome is:
Fly ſloth, ſweet drinks, be ruled by me,
Bleede not, but bathe, forget not this.

September hath 30. dayes.

The Moone 29.

And sith September sweete fruites doth giue,
The rype not infected, are good for to feede:
And Goates milke is good to, and helps for to liue,
Let blood, and take medicines, if ye haue neede.

perfect vnderstanding of the manner and order of the Computation, and other Tables heereafter following.

(·.·)

The order of this Booke, and the matters therein contained, are as followeth.

¶ First, herein is a perfect Rule to know the beginning & ending of the Termes, both of the Ciuil Law, and Common Law.

¶ Then followeth a Kalender, wherein are obserued the old Saints dayes, not of superstition, as though euery of thē mencioned in the said Kalender were a Saint, (for of some is knowne the cōtrary: neither if they were all Saints, are they therefore placed in this Kalender,) but because it hath bene a custome of auncient time to vse their names, in signifying and making certain the daies times, and Termes of the yeere, as by the dating of diuers olde Deedes, Euidences, and Recoꝛds will appeare. And because the same custome is yet remaining in the returning of writs and pꝛocesses, and also is commonly vsed in the noting & setting forth of the pꝛincipall Faires and Markets, and all the seasons of the yeere, those names serue well for the purpose, and therfore might not conuenientlyy haue bene left out. And vnto the sayde Kalender are added ꝑ Callends, Nonas, & Ides, because diuers Euidences are dated on those daies and by those woꝛds, and therunto also are added, the vigiles & Festiuall dayes, moꝛeouer, the very

degree

degree and signe that the sunne is in euery day of the yeere, according to his middle moouing truelie supputated, so that hauing this Booke, there shal be no occasion to call for any other Kalender.

¶ Thē beginneth the Computation of yeres, wherein is to be noted, that euery page therof is deuided into seauen seuerall coloms or places, as may appeare by the Tytles ouer euery of theyr heads. In the first place are the yeres of our Lord In the second the Prime. In the third the Epact. In the fourth the Dominical Letter, & the Leape yere, whensoeuer it happeneth. In the fift are the names of the Kings as they raigned, beginning with William the Conquerer. &c. And in the same place also are the Monthes that euery of thē entred into their raignes. And in the sixt are ỳ dayes of the Monthes that euery of thē began to raigne in. And in the seauen and last, are the yeeres that euery of them raigned.

¶ Also in the raigne of euery King, is shewed the day of his death, if he died being King, or the day of hys deposition if he were deposed, with a true account how many yeres, Monthes, Weekes or dayes he raigned.

¶ And heere I thinke it meete to declare somewhat of the commoditie and necessary vse of the Computation afore mencioned. And for the better instruction & vnderstanding therof, I wyll moue certaine Questions, & giue aunswere to the same in such sort, as shall so otter the order and maner thereof, (as it were by examples) that I doubt not, but the true and necessary vse of the same, shall plainly appeare to all men.

Question

1 Question.

¶ I would know by this Computation in the fourth yeere of King Edward the first, what was then the yeere of our Lorde, the Prime, the Epact, Dominicall Letter, and the Month and day that he began his raigne in, & what day in the weeke the same was.

Aunswere.

¶ Among the Kings, seeke out for King Edward the first, and then looke for the fourth yere of his raigne, and there it appeareth to be the yere of the Lord 1275. The Prime 3. The Epact 3. The Dominicall Letter F. The Month that he began his raigne in, Nouember, and the 16. day, which day that yeere was Saterday, as is easie to bee knowne if you looke in the Kalender for the 16. day of Nouember, accounting F. for Sunday, then that day must needes be Saterday, and so of all other the like.

2 Question.

¶ An Euidence dated the 15. Kalends of December in the third yeere of King John, I would know what day of the Month the same was, and how long it is since.

Aunswere.

¶ First looke in the Kalender in the Month of Nouember for the Kalends of December, & there you

you shall find the xv. Kalends of December is on the xvij. day of Nouember. The sæk in the Computation for K. John, and you shall find that the third yeere of his raigne, was in the yeere of our Lord 1201. And then set downe this yere of our Lord, wherin the question is asked, which is 1571 and take out thereof 1201, and there resteth 370. And so it must follow, that vpon the xvij. day of Nouember next, it shall be sithen the third yere of king John, 370, yeeres, and thus of the like.

3. *Question.*

¶ An Euidence dated the second Sunday in Lent, in the fourth yeere of K. Stephen, I would know in what yeere of our Lorde the same was, and also in what month, and on what day the second Sunday in Lent was then.

Aunswere.

¶ First looke among the kings for king Stephen. And when ye haue found him, then looke for the fourth yeere of his raigne, and there you shall find the yere of our Lord to be 1138, & the Prime 18, and B. the Sundaies Letter. Then go to the Table that teacheth to know Easter day, & all the moueable feastes, which is the next Table saue foure after the Computation.

And there vnder the Tytle of Prime, seeke among those numbers for 18. And when you haue found it, looke downeward frō the lyne where the Prime standeth, and seeke for the next B, which that yeere was the Sundaies Letter. And when you haue found B. goe forward in ꝑ line, & there you shal find the 20. day of Febzuary to bee that

yeere

yeere the first Sunday in Lent, and therunto put seauen dayes for one weeke more, and that sheweth that the second Sunday in Lent, that yeere, was the 27. day of Februarye. ¶ Then set downe this present yeere of our Lord, 1571. and take out thereof the yeere of our Lord that was then, which was 1138. and there resteth 433. And so it doth plainly appeare, that the 27. day of Februarye next comming, it shall be 433, yeeres sithen the fourth yeere of the raigne of King Stephen. And thus you may do with the like.

4 Question.

¶ I haue a Lease for xxx. yeeres, that began at Michelmas in the xvij. yeere of King Henrie the 7. my desire is to knowe this present yeere 1571. whether my Lease be expired, or how many yeeres I haue to come.

Aunswere.

¶ First in the Computation looke among the Kinges for king Henry the 7. and then for the 17 yeere of his raigne, which you shall find to bee in the yeere of our Lorde 1501. The which number take out of this present yeere of our Lord, 1571, and then resteth 70. so many yeeres of the sayd Lease shalbe expired at Michelmas next, and then shal remaine 10. yeeres to come, and so of the like.

5 Another question and plaine example, meete for such as cannot extract one number out of another.

¶ A Lease dated the 6. of July, in the 31. yere of the raigne of King Henry the 8. for the terme

of xl. yeeres, that began at our Lady day in Lent then next following: I would now know whether the said lease be expired, or how many yeeres there are to come.

Aunswere.

First looke in the Computation among the kings for King Henrie the eyght, and for the 31. yeere of his raigne, which you shall finde to bee in the yeere of our Lorde, 1539. Then at the next yeere following begin to reckon, and cal that one, and so tell downe in order all the yeeres following and end with this present yeere 1571. And the whole, you shall find the number of 32. And so many yeeres of the said lease shalbe expired at our Lady day in Lent next comming. And at that time there shall remaine to come of the said Lease, viii. yeeres, and thus you may account the yeeres of any Lease.

6 Another very plaine question or example, easie for all men to conceiue, and in this time is commonly vsed.

¶ A Lease dated the 17. day of August, in the v. yeere of the raigne of King Edward the 6, for the terme of 21, yeeres, which began at Michelmas then next following. I aske the question this 12, day of August 1571, whether the said Lease be expired, or how many yeeres are yet to come.

Aunswere.

¶ First in the Computation among ȳ kings, seeke for king Edward the vi. and for the v. yeere of his raigne, and there you shall find the yeere of our

our Lord to be 1550. Then beginne at the next yeare after, which is 1551, and call that one, and so tell downward all the yeeres, to thys present yeare 1571, and in the whole you shall finde 21, which plainly declareth, that at Michelmas next the aforesaid terme of 21. yeeres shall be fully expired. And this you may doo in the account of all termes of yeeres.

¶ Note also that in the said Computation diuers of the kinges haue in the first yeere of theyr raigne, no yeere of our Lord. The cause is, that they began in the same yeare that the former king dyed in. And therefore when you tell the yeeres, doo not reckon them y haue no yeere of our Lord.

¶ Note also that the yeere of our Lorde after the Computation of the Church of England, beginneth euer the 25. of March, which is the day of the Annunciation of our Lady.

¶ Note also, that when you account any terme of yeeres, that the same terme y your Lease first began in, must end and finish in the last yeere of your reckoning at the selfe same terme. And if your Lease began at Michelmas, for 21. yeeres, then it must needes ende at Michelmas the same yeere that the whole 21, yeeres are expired in, and if at Midsommer, then it must ende at Midsommer the same yeere, as the last question and example doth plainly shew.

¶ And this I trust may suffice for the instruction of the vse, order, and commoditie of the sayd Computation.

A COMPVTATION of yeeres.

The yeeres of our Lorde.	The Prime.	The Epact.	Sundaies Letter Leape yeere.	The names of the kings and monethes they began in.	The dayes of the Monthes.	The yeeres of the kings.

A declaration of these two Tables.

BY the first of these two Tables, may ye know the Circle of the Sun and Dominicall Letter

ter orderly and perfectly for euer, any time past, or any time to come, which Maister Graftons rondle could not doo, if ye list to extend it aboue 1615 in the place of 1588. set 1616. and so count orderly as yee did at the first for any yeere to come. And for any yeere past, doo thus, in the place of 1615. set 1587. and so count vpward till the yere ye seeke, and in like manner do by the Table that serues to finde the Prime and Epact, and so are they perpetuall without altering, which no one rondle can performe.

¶ Otherwise for the Circle of the Sun and Sundayes Letter. Add to the yeare of our Lorde 9. and deuide by 28. and the rest shewes the Circle of the Sunne, whereto in the Tables aunswers the letter dominicall, as in this example, to the yere 1588. I add 9. which makes 1597, which deuided by 28. the quotient is 57. and the remain is 1. which is the circle of the Sun for this yere, wherewith I enter the Table, and find that G F aunswereth thereto, which is the dominicall Letter for this yeere being Leape yeere, and so of the rest.

¶ The Leape yeere as ye may perceiue by the former Table, cahaungeth euery fourth yeere, for when ye may deuide the yeere of our Lord into 4 parts, then it is Leape yeere.

The Golden number and Epact.

The Prime is a number that beginneth with one and encreaseth yeerely one, till it come to 19. and then beginneth againe, and thus may ye find it. To the yeere of our Lord ad 1. and deuide it by 19. the rest shewes the Golden number for that yeere

yeere, and for ease of working ye may leaue 1500 and deuide the rest, as for example by this yere 1588, which is more thē 1500. by 88. the which I deuide by 19, and there rests 12, which is the Prime or golden number for this yere that present is, and the next yeere shall be 13, and so foorth till 19.

For the Epact.

The Epact or concurrant is thus found. Multiply the Prime by 11, and take away 30, & the rest is the concurrant or Epact. As for example, 1588, 12, is the golden number, which multiply by 11, makes 132, which diuided by 30, resteth 12, ỳ Epact for this present yeere. Or thus more easily. Ye must imagin 3, places, & on the thombe most fitly, that is the roote of the thombe ỳ first, and the middle ioynt the second, and the toppe of the thombe the third, then in the first place, which is the roote of the thombe, put this number 10, & in the middle ioynt of the thombe 20. and at the toppe 30. this put in memorie, by ỳ order of these places shalbe counted the goldē number. As one in the first place or roote, and two in the second or middle ioynt, and three in the third place, then so returning, set 4. on the rote or first place, 5, on the second, &c. till ye come to the golden number for the yeere, for the which you seeke, and the number of that place must be ioyned with the golden nūber of the yeere, and that that it amounts to, shal be the Epact, so that it passe not 30, but if it passe 30, let goe 30, and the remaine is your request. As in this example I will expresse it more plain. In the yeere of our Lord God, 1588. the Prime is 12, which counted by the said three places of the thombe, endeth at the third, where this number 30, is placed, which both added, make 12, the very Epact for this present yeere, &c. And note that

that the Epact beginneth the first day of March, and the Dominicall Letter and Prime the first day of January.

To know the age of the Moone.

¶ The Epact knowne, to know the age of the moone ye must haue three numbers. The first is the Epact, the second the number of the months from March (including both) the third ꝑ dayes of that month passed, then ioyne these three numbers together if they rise not to 30. so old is the Moone, if they passe 30, being left, they also are the age of the moone, this is meant by the monethes that haue 31. dayes, for in them that haue but 30. dayes, the coniunction is at the 29, day and they that passe 29, are the age as before.

As for example.

¶ This yeere for the 15, of August, I would know the age of the moone. First the Epact is 12, and the monthes frō March to August, are 6, and 15, the day of the month, which all put together makes 33. from whence take 30. & there rests 3, the age of the Moone that day.

Another example.

¶ For the 8. of Septem. the Epact being 12. the Monethes 7. and daies 18, added together, makes 37. from whence take 29. for Sept. hath but 30. dayes, and there rests 8, the age of the moone for that day, and in like manner shal wee giue to Febzuary 29, dayes of the moone.

And

¶ And to knowe the day of the Chaunge, do thus. To the Epact adde all the Monethes from March, and if they ioyned together come not to 30. loke what they lacke of 30, and at so many dayes of the moneth the Moone chaungeth. If they be aboue 30. and the Moneth of your desire haue 31. dayes, then substra. 30, but if 30. dayes. then sustra. 29. and that resks take from 30. then loke what remaines, and at so many dayes of the moneth, the Moone chaungeth.

As for example. In the yeere of our Lorde 1573. the Epact is 26. and Sept. from March 6. which added together make 32. from which take 29. because September hath but 30. dayes, and there rest 3. which being taken from 30. leaues 27. vpon which day the Moone chaungeth this yeere in Septemb. Againe to make it more plaine, I will proue by March that is past. The Epact is 26. which take frō 30. (because March hath 31, dayes) and there resteth 4. which is the day of the change. And to know the full or opposition, ad to the change day, 14. dayes 18. houres & for the other aspects is made this Table that followeth.

						D.	H.
To the conjunction for the	✶ □ △	to the full of the	△ □ ✶	ad		4	22
						7	9
						9	20

A Table to knowe howe long the Moone shineth, and when she ryseth and setteth.

*

The age of the Moone increasing	The howres she shynes. H. M.	Her age decreasing.
☽		☾
1	0 48	29
2	1 36	28
3	2 24	27
4	3 12	26
5	4 0	25
6	4 48	24
7	5 36	23
8	6 24	22
9	7 12	21
10	8 0	20
11	8 48	19
12	9 36	18
13	10 24	17
14	11 12	16
15	12 0	15

The vse of this Table is thus, the age of the Moone once knowne, and founde in the side of the Table, then aunswering thereto, shal ye see the houres and minutes of her shyning to be counted from the sunne setting, all the increasing till the full, and till then shee shineth in the euenings, and after the full, shee shyneth before the sunne doth ryse in the morning, so many howres before the sun ryseth, as the Table sheweth, and for her rysing and setting, doe thus all the increase, adde to the howres of the sun rysing, the howres found in the Table, and it shewes the howre of her rysing. Againe, adde to the howre of the sunne setting, the howres and minutes found in the Table, and that is the howre of her setting. Then after the full for her rysing do thus, from the sunne rysing, take the howres founde in the Table, and the rest shewes the rysing, and from the howre of the sunne setting, take the howres founde in the Table, (borrowing twelue, if the substraction cannot els be made) and the rest sheweth the setting of the Moone.

All theſe aforeſaide, by example ſhall be made manifeſt.

¶ The 30, day of September, 1588, I finde the Moone to be 21, dayes old, wherwith I enter the Table, the moone decreaſing, and finde ſeauen howres two minutes aunſwering thereto, ſo I ſay the moone ſhyneth ſeauen howres 2, minutes in the morning before the ſunne riſe, and the ſunne the ſame day riſeth at 6, and 12, minutes, wherto I put 12, howres, els coulde not the ſubſtraction be made, & it makes 18. houres 12. minutes from which I take 7, howres 2, minutes, & there reſtes 11, howres 10, minutes before midnight, at which inſtant the moone ariſeth.

Another example.

¶ The 20, day of October, 1588, the moone is 10, daies old, wherwith I enter the Table, the moone increaſing, and find 8, howres aunſwering thereto, which ſheweth that the moone ſhineth 8, howres in the euening after the ſunne is ſette, and the ſunne the ſame day ſets at 5, a clocke, 15, minutes, whereto I put 8, the howre of the Table, and it makes 13, howres, 15, minutes, from which I take 12, which is midnight, and there reſteth 1, houre 15, minutes, which ſheweth that the moone ſhall ſet the ſame day at 1, a clocke 15, minutes after midnight. Likewiſe the ſame day the ſun riſeth at 6, of the clocke, 41, minutes, to which I adde 8, and it makes 14, howres 41, minutes, from it I take 12, (for that is noone) and there reſtes two houres, 41, minuts, which ſhewes, that at 2, of the clock 41, minutes after noone, the moone ryſeth though to vs vnſeene. And ſo for all other times.

¶ I

A rule to knowe the howres of the night by the ſhadow of the Moone in any Sunne Dyall.

FYrſt knowe the age of the Moone, then hauing a ſunne Dyall, ſee where the moone gyueth ſhadowe, and from the ſame take the howre & minute aunſwering to the ſame if the moone encreaſe, and the reſt ſheweth the howre after midnight, but after the full, all the wane ad the ſame, & that ſhewes your deſire.

Example.

☾ The moone beeing 10, dayes olde, and in the Dyall ſhee poynteth by the ſhadowe the fift houre, fro that I take foure, which aunſwereth to tenne, becauſe ſhee increaſeth, and ſo reſteth one, which ſhewes that it is one of ♄ clock at midnight. Againe, ſhe being twenty and one daies olde, poynteth in the Dyall the 11, howre, thereto I adde 4, houres and 48, minutes, and it makes 15, howres 48, minutes, thence I take 12, and there reſteth 3, houres & 48, minutes, the true howre of the night.

60 A rule to know the howre of the day, eyther afore noone or after noone, by the beames of the Sunne, and the length of the Ruler, as followeth.

Firſt yee muſt haue a Rule of 3. or ſixe ynches long, which muſt be deuided into twelue parts, as in the figure following, (which ſo prepared) when yee wil know the houre of the day, ſet your rule or ſtaffe vpright vpon a plaine leuell bourde or grounde, and take the iuſt length of the ſhadow, what parts of the rule it cõtaineth, wherwith enter the Table following, and againſt the degree of the ſunne for that day, ſeeke the length of the ſhadow, and in the head of the Table, yee ſhall ſee the howre of the day, eyther in the forenoone or afternoone, as your diſcription ſhall diſcerne, for that the ſunne hath like altitude at like diſtance from the Meridian lyne in the forenoone aſcending, and in the afternoone deſcending, if yee finde not the iuſt length, take the greater number next to it in the forenoone, and in the afternoone take the leſſer next thereto, and each ſhall giue you the howre paſt, as in this example.

¶ The 23. of Nouember, when the ſunne is in the 10. of Sagittarie, I woulde knowe what howre it is by the ſunne. I ſette vppe the deuided Rule, and the length of the ſhadowe is 57, partes long, that is 4, times the length of the Rule, and 9. parts more, which ſhewes that it is tenne of the clocke in the forenoone, or two of the clocke afternoone, which is eaſily diſcerned.

Another

Another.

☾ The 5. of December, the sunne beeing in the 23. degree of Sagittarie, I find the shadow to be 52. parts, that is, foure times the rule & foure ouer, which sought in the Table against the 20. degree of Sagittarie, for it is neerest (for so must yee alwaies doo when the number yee seeke is not precisely found) and find not 52. but the neerest lesse is 47. and the next aboue is 62. the difference is 15 then take 47. from 52. and there rests 4. then try by the rule of proportion, if 15. giue 60. for so many minutes be in one howre) what shall 4, giue, multiply the second by the thirde, that is 60. by 4, and the product or ofcome will be 240. which deuided by the first, the quotient will be 16, which shewes, that it is eyther 16. minutes before 11. in the forenoone, or 16. minutes after 1. of the clocke in the afternoone, and so of all other, which in mine opinion is the most precise horologie that may bee, though at the first it seeme somewhat hard, the Table followeth.

A Table to know the howre of the day, by the ſhadow of the Sunne.

A deſcription of the order and vſe of the aforeſaid Table as followeth.

FIrſt note, that the ſaid Table is deuided into fiue colomes or places. In the firſt is the Prime, in the ſecond the Dominicall Letter, in the thyrd, the firſt Sunday in Lent, in the fourth, Eaſter day, in ye fift, Rogation weeke, and in the ſixt, Whitſunday.

¶ And for the better vnderſtanding of the vſe therof, ye muſt alwaies when ye deſire to know the time of any the ſaide Feaſtes, firſt conſider what yeere of the Lord it is that yee would knowe them in, and then looke the Prime of that yeere, and the Dominicall Letter, and thoſe you may eaſilie finde and learne in the tytle Table for that purpoſe, that is before ſet forth. And when ye know the Prime and Sundaies Letter, then come to this Table, and it will eaſily ſhew you your deſire.

Example.

¶ I would know in the yere of our Lord, 1588 when ſhall be the firſt ſunday in Lent, Eaſter day, &c. Firſt I goe to the Table aforeſaid, and there in the firſt colome, I ſeeke out the yeere of our Lorde, 1588. & in the ſecond colome directly againſt that, there I find that yeere the Prime to be twelue, and vnder that, the Dominicall Letter to be G F. Then I come to the aboueſaid Table, and firſt vnder the Title of the Prime, I ſeeke for the number of 12. and when I haue found the ſame, then I looke downeward among the Sundayes Letters for the next F. that is after the Prime, for ỳ is the Sun-

dayes

dayes Letter for that yeere, & when I haue founde F. I goe forward in that line where F. standeth, And first I find that the 24. day of February that yeere, shall be the first Sunday in Lent. The 7. day of Apryll Easter day. The 12. day of May Rogation sunday, and the 26. day of May, whitsunday. And thus may you doo with al other, both for time past, and time to come, for euer.

¶ Note also that this Table in the beginning, sheweth the lowest Month and day in the yeere, that Easter and all other moueable feasts doo fall on. And in the end, it sheweth the highest moneth and day that Easter, and the moueable feastes doe ascend vnto: so may it be truely saide, that it is a perfect Table.

¶ And yet hereunto will I adde one Rule, which though it be in olde and rude meeter, yet is it worthy of memory, and it is the same rule wherby this Table was made, which is thus.

In March after the first C,
Looke the Prime where euer it be:
The third Sunday after, Easter day shall be,
And if the Prime on the Sunday be,
Then reckon that for one of the three.

A Rule to know certainly the Dogdaies.

¶ The dogge-dayes doe alwaies beginne the sixt of Iulie, & end the seauenteene of August.

A yeere hath
- By the course of the sunne xij. Monethes.
- By the course of the Moone, xij, Monethes.
- Of weekes, fyftie and two, that is, 365, dayes, except it bee Leape yeere, and then it hath 366, dayes.

A rule to know all the Vigiles and fasting dayes throughout the whole yeere.

With moueable feastes, I will begin,
As Easter, Ascention, and Whitson euen:
The Rogation weeke in like case,
Must be kept as it commeth in place.
And the Apostles, as Peter and Paule,
Iames, Mathy with other moe:
Andrew, Matthew, and the rest as they fall
Bartholmew, Thomas, Iohn Baptist also.
Simon and Iude, and the Purification,
The birrh of Christ, and the Annuntiation
Ember, Frydaies, and Lent as it doth come,
The euen of all Saints, & so we haue done,

A rule to know how many dayes euery Month in the yeere hath.

Thirtie dayes hath Nouember,
Aprill, Iune, and September,
February hath xxviii. alone,
and all the rest haue thirty and one,

A Table for the Tydes.

last before mentioned.

IF you desire at any time to know when it is a ful sea, or high water at any Port or Haue in England, Wales or Ireland, or in any other part of the world. If first by your own knowledge, or the knowledge of any expert Mariner, you know when you see the Moone in such a parte of the firmament, that then it is full sea at such a Porte or Hauen, then these Tables shall be needles for you. But if you cannot so do, and wouldе learne, then resort to these Tables, and first consider with your selfe how many daies old the Moone is, the day that you desire to know the tyde. And in the myddle of the said Tables, you shall finde in the vppermost part of them this tytle, The age of the Moone, and right against the day of the age of the Moone, you shall find on both sides, the places and poynts of the firmament, as South, South and by west, and South southwest. &c. And next vnder ſ lyne are these Letters, H. M. which signifie howres and minutes. Then hauing in memory the age of the Moone as aforesaid, goe directly to the title of that place of the Firmament, to the which when the Moone commeth, maketh a high water, and there you shall find the houre and minute when it is full sea in that place.

Example.

I would know at what howre it wilbe a ful sea, or high water at London Bridge the 12. day of December next, being in the yeere of our Lorde, 1588.

Answer

Aunſwere.

¶ Fyrſt reſort you to the former Table that teacheth you to know the age of the Moone at all times, and by that rule you ſhall find, that the twentie day of December next, the Moone ſhall be foure dayes old: Then looke vpon the tytles in the vppermoſt part of the aforeſaid Tables, and among them you ſhall finde London.

¶ And directly in the next vnder the ſame, you ſhal find South weſt, the which declareth, that when the Moone is in the Southweſt, that then it is full ſea at London Bridge. Then goe downe the lyne of the age of the Moone vntill you come at the fourth day, and there you ſhall find at the left hand of the ſame, directly vnder the lyne where Southweſt ſtandeth, theſe figures 6. 12. which is ſixe of the clocke and twelue minutes, at which time the aforeſaid xii, day of December next, ſhall be high water at London Bridge.

¶ And in the vppermoſt part of the aforeſaid Table, I haue written the names of ſome ports, at which time the moone comming to that place, cauſeth a full ſea, and vnto thē ye may adde ſuch other as you haue or ſhall haue knowledge of.

A Rule to know by hart what part of mans body is ſubiect to any of the 12. ſignes.

THE head and face doth Aries rule,
as Taurus doth the necke:
But armes and hands, in Geminies power,
doth ſuffer ioy or wreck.
Cancer doth guide the breſt, the longes,
the ribs and ſtomack ſtout,
Leo likewiſe hath hart and back,
thereof ye neede not doubt.
The belly and bowels Virgo hath,
and eke the entrals all:
The loynes, the kydnies and the raynes,
to Lybraes lot doth fall.
The blather and the ſecrete parts,
to Scorpio are the fees,
The thyghes doth Sagittary guide,
and Capricorne the knees.
The legs to Aquary belong,
to vſe them as he luſt,
But Piſces holdes the feete and heeles,
and ſo for euer muſt.

A Table ſhewing what ſigne the Moone is in, and ſhal be for euer, and alſo what part of mans body euery ſigne doth gouerne, with the infirmities incident therto.

A declaration of the Table that is on the other ſide, ſhewing at all times what ſigne the Moone is in.

Yrſt, for the better vnderſtanding therof, note that this Table is deuided into fiue tytles, that is to ſay, into Monethes, dayes, Prime, ſignes, and gouernment of the ſignes. Nowe if yee wyll know at any time what ſigne the Moone is in, you muſt firſt ſeeke out the ſayde Table among the monethes, for the month wherein you deſire to be certified, and likewiſe among the tytle of dayes, for the day of the moneth that yee deſire. And when yee haue found them, then begin at the month, and tel the ſame for one day, and ſo goe forth vntill you come to the number of the dayes that ye would haue, and note well what day the ſame doth end vpon, and keepe it in your memory. Then ſeeke for the Prime of that yeere among the tytle of Prymes, and accounting the Prime for one, tell ſo many dayes as before you committed to memorie: and then on the right hand ye ſhal find what ſigne the Moone is in, and what member of mans body it gouerneth, with the infirmities therto pertaining.

Example.

¶ I would knowe the eyght day of December, next, in this preſent yeere of our Lord, 1588, what ſigne the Moone wyll be in. Firſt I looke in the aforeſaid Table, and among the tytle of the monthes, and there I find December, placed againſt the figure 4, which is the tytle of dayes, and there I beginne to reckon,

reckon, and call the figure of 4, one, and ſo tell downewarde vntill I come to 8, and I finde that the ſame endeth vpon 12, which number I keepe in memorie: Then I ſeeke for the Prime of thys yeere, which is 4, among the tytle of Primes, and on the left ſide ther of, ſtandeth 11, and there I begin againe and cal that 11, one, and ſo goe downeward till I come to the nũber which I had kept in memory, which was twelue, and on the right ſide thereof, I find the ſigne to be Capricorne, which gouerns the knees with his infirmities, itching, red ſpots, leproſie,

A perfect eaſie, and readie rule, to knowe in what ſigne the Moone is in euerie day.

When ye know the age of the Moone, double the ſame, and then deuide it by 5, and the quotient ſhall ſhewe you how many ſignes ye ſhall adde to the ſigne that the Coniunction was in, and the remaine euery vnity thereof giueth 6, degrees, which ye muſt adde to the degree of the ſunne the day of ☌, yf they paſſe 30, adde one ſigne, and the reſt will ſhewe the degree of the ſigne, or very neere: but of the ſigne it will neuer fayle for ſurety.

Example.

☾ Thys preſent 18 of October, the Moone is 23, which doubled is 46, and deuided by 5, the quotient is 9. and 1, reſt 1, that is 9, ſignes, and 6, degrees, which I adde to the ſigne and degree of the coniunction, (that is Virgo the 12) and it is 69, 17, and ſo of all others.

Certaine elections that are to be choſen by the courſe of the Moone, in any ſigne of the Zodiack. And firſt of blood letting.

LEt bloode at no time without great cauſe, for it weakneth and maketh way to many diſeaſes, but if ye doe, ſee it be after good digeſtion and faſting, in any temperate day, and afterwarde vſe fine meates of light digeſtion, abſtaining from all exercise, as bathing, watching, and carnall copulation. Next conſider the time of the yeere, if it be in ſpring, let bloode at the right ſide, and in the harueſt at the left. Thirdlie, the age of the perſon: for young perſons, from the change to the firſt quarter: for them of middle age, frō the firſt quarter to the full, & for elder perſons, from the full to the laſt quarter, and for old folke, from the laſt quarter to the change. Fourthly conſider the parties complection. If it be collericke, thē let the Moone be in ♋ ♌ the laſt halfe, or ♐. If it be phlegmatike, in ♈ or ♐. If he be melan. in ♎ the firſt part, or ♒. But if he be ſanguine, let the Moone be in any of the foreſaid ſignes, onely beware you let not blood, in any member when the Moone is in the ſigne that ruleth the ſame, neither the day of the change, nor the day before, nor the day after, for that were perrilous.

The beſt times to purge, if that time be temperat } by drinks, by electua, by pylles. } Luna in { Scor. Can. Piſc.

To enter bathes for hote diſeaſes, Scor. Can. Piſces.
For cold diſeaſes, Aries, Leo, Sagit.
To ſtop fluxes, rumes and laxes. ♉ ♍ ♒.
To take preparatiues, Aries, Leo, Sagit.
To take vomits, Leo, Aries, Capri, To take Gargariſes, Aries, Cancer, Capri, To take Glyſters, Libra, Scorpio.

Good

Good to comforte the vertue. { Attractiue. Retentiue. Digestiue. Expulsiue. } the Moone in { ♈ ♌ ♐ ♂ ♍ ♑ ♊ ♎ ♒ ♋ ♏ ♓ }

To cut hayres that they may growe better, Taurus, Virgo, Libra, and Luna increasing.

To geide or lib Cattell, Sagita, Capri, Pisces, and Luna decreasing.

Good to sowe or set, Taurus, Cancer, Virgo, Libra, Capri, and Luna increasing.

To grafte or plant, Taurus, Aquarius, and Luna increasing.

To cut Vines, Aries, Scorp, Libra, and Luna increasing.

To fell wood for Timber from S. Barnabas day in June, till the 1, Callend, January, in the wane of the Moone.

To fell fyre woode, that the stocke may sone spring, from the change to the first quarter.

To remoue grafres or young Trees, at the last quarter of the Moone.

A deſcription of theſe two Tables following.

THeſe two Tables following, ſhall perfectly ſhewe you the breake of the day, ſunne ryſing, length of the day, and night artificiall, the ſetting of the ſunne, & twilight for the whole yere, whereby ye may know the Planetarie howre, and what Planet dooth raigne any day or howre for euer, the vſe is thus.

¶ In the firſt collome looke for the month wherein yee are eyther deſcending, or aſcending, then in the next collome thereto, finding out the day, or the next thereto, and right there againſt toward the right hand if ye deſcend, ſhall ye find the howre and minute of any of the aforeſaid in the collome vnder the title thereof: but if ye aſcend by the right ſide of the Table, then looke toward the left, and do as before, the worke is eaſie, it needes no example at all: but becauſe I promiſed to make it as plaine as might be, I will ſhew an example ſufficient, and that is thus. The 22. day of September, I would know all that is aforeſaide. I enter the Table deſcending by September, and finding the 22. day againſt the ſame in the collome vnder the title breake of the day, I find 4, 20, which ſheweth there at 4, of the clocke 20, minutes in the breake of day. In the nert 6, 18, which ſhewes the ſunne ryſing, in the third collome 11, howres 24, minutes, the length of the day, and 12, 36, in the fourth the length of the night, 42, the ſetting of the Sunne, and 7, 40, the twilight, or the going downe of the day light, and ſo of all other dayes.

Mars.	0	11	8	12	9	0	10	Saturne.

The vse of this Table is thus.

VNder the day of your request, seeke the howre that ye desire, then on the left side right there against shall ye see the Planet that gouerns that howre by day, and at the right side the Planet that rules it by night, as thus. On Thursday the thyrde howre of the day rules ☉ & the 8. howre of the night gouerns ☽ and so of the rest, for it is plaine enough.

A Table to knowe the length of the Planetary howre, from the ſhorteſt day, and longeſt night, tyll the longeſt day and ſhorteſt night, of what length ſoeuer the day or nyght be.

17	1. 20	1. 26	1. 27	1. 28	1. 20

The vſe is thus.

¶ Know the length of the day or night, that yee require by the Table proceeding in howres and minutes, and therewith enter this Table, the howre at the ſide, and the neereſt minute at the heade, and then diſcend right againſt your howre, and there in the cõmon angle, ye ſhall finde the howre and minute, or mynutes onely that the Planet raignes by the howres of the clockes.

As for example.

¶ The 12. of June, the day is 16, howres, 20, minutes, wherewith I enter this Table as is ſhewed, and

and in the angle I finde 1, howre, 22. minuts, which sheweth that a Planet that day rules an howre and a quarter, and 7. minutes of the clockes. Also for the same night I find it to be but 7. howres and 40. mynutes, wherewith I enter this Table with 7. at the side, and 36. at the head, (for that is necrest) so in the common angle I finde but onely 38. minutes, which shewe that a Planet in that night, rules but halfe an howre and 8. minutes of the clocks, and so of the rest.

A declaration of thys Figure following.

BVt for more ease in account, I haue deuised thys figure following, which presently shall shewe you the howre of the Planet by day or night at all tymes. The vttermost margent whereof, is deuided into 24. parts, representing the 24. howres of the Equinoctiall or clocks, which euer are of 60. minutes, and euery howre is deuided into foure parts. Within the same haue you the howres artificiall, or howres of the Planets, as well for the night as for the day, the Orizon lyne deuiding the same, which for the better knowledge is bedecked with shadowes, & all that is aboue the same is accounted day, because when the sunne comes vpon that lyne in the East, it is day, for then begins the day artificiall. And when the sunne comes to the same in the west, hee departs from our sight, and then begins the artificiall night. So likewise all vnder the same is night, and therefore printed blacke, in the center whereof must be put a thred with a knot, or a small Beade to be remoued at your pleasure.

The

The vſe thereof is thus.

I Know by the Table for that purpoſe, the riſing of the Sun for the day ye deſire, and vppon the ſame howres and neereſt quarter, in the vttermoſt margent lay the thredde, remooving vp and downe the knot or Weade, till it lye vpon the Orizon lyne, there holde it ſtedfaſt at the center ende, and remoue your other hand to the howre of the clock, called the howre of the day, either before noone or after, thē the knot among the Planets howers, ſhall ſhewe the iuſt howre of the Artificiall day expreſt by fygures of Arithmaticke, wherewith enter the Table of the Planets, with the day

day at the head, and so the number of the howre shall shew you at the left side, the Planet that rules by day, and at the right side, the Planet that rules the same hower by night.

Example.

☞ The 20. of October being Tuesday, I would knowe what Planet raignes at three of the clock, 30. minutes after noone. By the table of the sunne rysing I find that the 20. day of October, the sun ryseth at 7. of the clock 15. minutes, which found in the figure, I put the thred thereto, and set the knot on the Orizon, then remoue I the thred to 3, of the clocke, 30. minutes afternoone in the margent, and the knotte shewes the eleuenth houre of the artificiall day, wherwith I enter the table of Planets vnder Tuesday, and right against 11. at the lefe side is ♂ which rules that present howre.

☞ Againe at tenne of the clock at night I woulde doo the like, I remoue the thred to ten in the margent, and the knot amongst the howres of the night, shewes the 5. howre of the artificiall night. wherewith I enter the Table as before, and find right against 5. at the right side ♀ which rules that present howre, &c.

Thys done, if ye desire to know how long the Planet of that howre hath ruled, or how long hee shal rule, doe thus. Set the thredde to the time that ye desire to know the Planets howre, and if the knot light vppon the time that deuides the artificiall houres, then and at that instant begins the planetarie houre, but if the knot fall within the space, remoue your knot to the lyne proceeding, then shall the thredde in the margent shew at what time the Planet began to raigne, afterward remoue the knot to the lyne following, and the thred in the margent will shew you the instant of the clocke when the Planet shall cease to rule, whereof take thys example.

☞ Sun-

℄ Sunday the xxviij. day of March, the sunne ryseth at 5. of the clock, 3. minutes, and at 15. minutes past 9. of the clock, I find by the foresayd rules of the moone to raigne at that instant, because the knotte falles in the midst betweene the lynes, then sette I the knot back to the lyne, and the thred sits vpon 30. mynutes after 8. then began Luna to raigne. Then remoue I the knot to the lyne following, & the thredde doth marke in the margent 45. minutes past 9. of the clock, and then doth the moone end her dominion for that time, till her course returne, then take 8. 30. out of 9. 45. and there rests 1. 15. and so long raignes a planet at that time.

The Properties and effects of the Planets.

SAturne is an enemie to humane nature, a destroyer of lyfe, maleuolent, cold, dry, earthly, masculine, of the day, the greater infortune of mans body, he rules the right eare, the splene, the blather, & the bones, of humours melancholy mixt with fleame, of persons olde men, Husbandmen, Moyners, Masons, Tanners, Jewes, Enuious persons, stubborne, solitarie, styll, leane, beardlesse, couetous, gluttons, deceiuers. Husbandrye, fruites of the earth, mynes of mettalles, treasures, buildings, heritage of the dead, possessions, prysonne, and hath of colours blacke. The greatnes of his body is 91. times so big as the earth, the quantity of hys beames are 9. degrees forwarde and backwarde. He makes his reuolution or passeth thorow the Zodiacke

in

in 30. yeeres, his fewest yeeres are 30, his meane 43. his greater 57. and his greatest, are 465. yeres, he is expresst in likenes of an old man, leaning on a staffe, or holding a Sith in his hand, thus. ♄

Iupiter is the greater fortune of the day, hote and moiste, benevolent. Hee rules in mans bodie, the liuer, lights and lunges, the ribs, the arteryes, the bloode, the seede, pulses, and the left eare. Of humours the sanguine. He signifieth Bishoppes, Prelates, Lawyers, Iudges, shamfast, gentle and humble, iust, honest, true faythfull, liberall, vertuous and religious, Gouernours of Cities, & riche men, Ecclesiasticall dignities, religion, iustice, honestie, prayse. Of colours brewe, or cytrine. The greatnes of his bodie is 95. times so much as the earth. The quantity of his beames are 9. degrees, he endes his course in 12. yeres almost. His fewest yeeres are 12. his meane yeres are 45. and a halfe, his greater yeeres are 79. and his greatest yeeres of all are 428. And to shewe forth his threefolde thunderbolts, hee is expresst with three draughtes thus, ♃ which is not much vnlike a Mace or scepter of honour, as some very aptly haue imagined.

Mars is the lesser infortune masculine, of the night, immoderatly hote and dry. Of mans body he gouerns the gall, the veines, sinnowes, stones, and the left eare, of humours the chollericke, and of colours red. He signifieth of persons, the warriours, seditious, disdainfull, coniurers or conspyrers, prefull, theeues, cruell, bolde, irreuerent, murtherers, Captaines, Chirurgians, Curbes, terrible, violent, carcles, workers in fyre-works Gunners and Fownders, warre, strife, dysention, tyranny, violence, armorie, Alchemy, and all thinges wrought and done by the fyre. The greatnes of his body, is once so bigge as the earth, and halfe so

bigge again, and one eighth part of the same. The quantity of his beames are 8 degrees. Hee endes his course in two yeeres almost, hys fewest yeers are 15, his meane yeeres 40, and a halfe, his greater yeres are 66. and his greatest yeres are 264. and because he is the God of warre, he is expyest with a darte, thus. ♂

Sol is the light and Lampe of heauen, & giues life naturally to all thinges, he is an indifferent Planet, moderatly hote and dry, masculine of the day, fortunate by aspect, but infortunate by corporal coniunction. He rules of mans body, the brain, the marrowe, the ioynts, the right eye of a man, & the left eye of a woman. Of collours, deepe yellow or golde collour. Hee signifieth Kinges, Princes, Magistrates, famous persons, desirous of honor, and ambitious. Also Kingdomes, Empires, Nobilitie, magnanimitie, fortitude, glory, rule, honor. The greatnes of his bodie, is one hundred sixty and sixe times so bigge as the earth, and somwhat more. The quantity of his beames are 15, degrees He passeth thorow the 12, signes, in 365. dayes, & 6. howres almost. His fewest yeeres are 19. hys meane yeeres are 69. and a halfe, his greater yeres are 120, and his greatest yeeres are 1460. and because he beares the Image of Apollo, hauing a golden Apie in his hand, therefore in that likenes, or by a round circle, hee is figured thus ☉

Venus is the lesser fortune, feminine of the night colde and moyst, temperate, benenolent. Of mans body, she rules the throate, pappes, belly, raynes, matrix, loynes, fat spleene, and the buttockes. Of humours, fleame, of collours, greene and whitish. She signifieth of persons, ♀ faire condicioned, the mercifull, meeke, the fine, pleasant, & delightsome, the effeminate, louers, dauncers, banqueters, musitions and Poets. Also stability, ioylity, loue,

mercy,

mercy, beautie, giftes of friendes and women, mariage, dowry, ornaments, Jewelles, luſt and lecherie. The greatnes of her body is the 37. parte of the earth. The quantyty of her beames, are 8. degrees. She endeth her courſe as doth the ſun, her feweſt yeeres are 8. her meane yeeres are 45. her greater yeeres are 82. and her greateſt yeeres are 151. And becauſe ſhe beareth two dartes, one of Golde an other of Leade, ſhe is expreſt by a double draught thus ♀ or by a looking-glaſſe, which is more proper.

Mercury is conuertible, good with the good and badde with the badde, ſometime maſc. and of the day, ſometime feminine, and of the night, hote with the hote, and colde with the colde, moiſt with the moyſt, and dry with the dry Planets, as he is configured to any. Hee rules of mannes body, the mouth, the tongue, the thoughtes, the memory, the handes and the thighes,, He ſignifieth of perſons Philoſophers, Scriueners, Marchants, Paynters, deuiſers of ſubtilties, crafty, deceitful, ſwaueringe, lying, proude. and ſcornefull. Alſo all kinde of Sciences, buying, ſelling, contracts, honeſt ſtudies diuination, and curioſity. Of collours, the ſky colour, or the ſpeckled of many collours. The greatnes of his body is the 32000. part of the earth. The quantitie of his beames, are 7. degrees. Hee makes his reuolution as the Sunne and Venus. His feweſt yeeres are 20. his meane 48. his greater yeeres 76. and his greateſt yeeres are 460. Hee is figured as it weare wearing a hatte or winges, thus ☿ or els more properly by his charming rod that is enuironed with ſerpents.

Luna is naturally colde and moyſt, of the night feminine, ſhe is the carryer and deliuerer of the influence of all the Planets thorowe her Orbe vnto

bs. She rules the left eye of a man, and the ryght eye of a woman, and of both, the stomack, the tast, the liuer, the bellie and the left side. Shee signifieth noble women, widdowes, the vulgar sort, & those of continual motion, as Marriners. Messengers, Legats and vagabonds. Also all things þ abound in moysture, the Sea and Riuers, with theyr ebs and floodes, the studie of histories, Embassages, Nauigation, iourneying, seruice, planting, sowing, and all water workes. Of humours the fleame: of colours, white or siluer colour. The greatnes of her bodie is the 39. part of the earth. The quantity of her beames, are 12. degrees. She makes her passage through the Zodiacke in 27. dayes, and 8. hours, and ouertakes the Sunne in 29. daies, 12 houres or there about. Her fewest peeres, are 25. her meane peres are 66. & a halfe, her greater peres are 108. and her greatest peeres are 520. and because she is commonly seene horned, or halfe round shee is figured thus (

The Dragons head, which is the intersection made by the cutting or crossing lines of the Orbes of the sunne or Moone) is good with the good, and badde with the badde, for if it be ioyned with good Planets it augmenteth their goodnes, and conioyned with the euill, it doth increase the malice and euill nature of them, & is figured thus ☊

The Dragons tayle, which as it is the opposite poynt to the head, so it is contrary in nature, for with the good it is badde, and with the badde it is good, for with whom soeuer it is ioyned, it dooth deminish the operation of them, bee it good or bad, and is expressed thus ☋

¶ The

The names of all the 93 Colledges and Halles in both Vniuersities, Oxford and Cambridge, and of *theyr Founders*.

V Niuersitie Colledge, founded by Allured, king of the Saxons, in the yeere of our Lord. 872. Vniuersitie Colledge

2 Bayly Colledge, founded by John Baylioll, king of the Scots, in the yeere of our Lord 1263 Baylioll Colledge.

3 Martin Colledge, founded by Walter Martin, Bishop of Rochester, in the yeere of our Lord 1276. Martin col.
